

Machine Vision and Production Process Camera Observation Systems

Using our individually designed camera observation systems allows engineers and managers to view their manufacture process at key stages of production from any network connected PC.

Cameras ranging from fixed high definition HD used for close up machine viewing or controllably PTZ (pan/tilt/zoom) that may be used for general observation and for zooming into a particular production process.

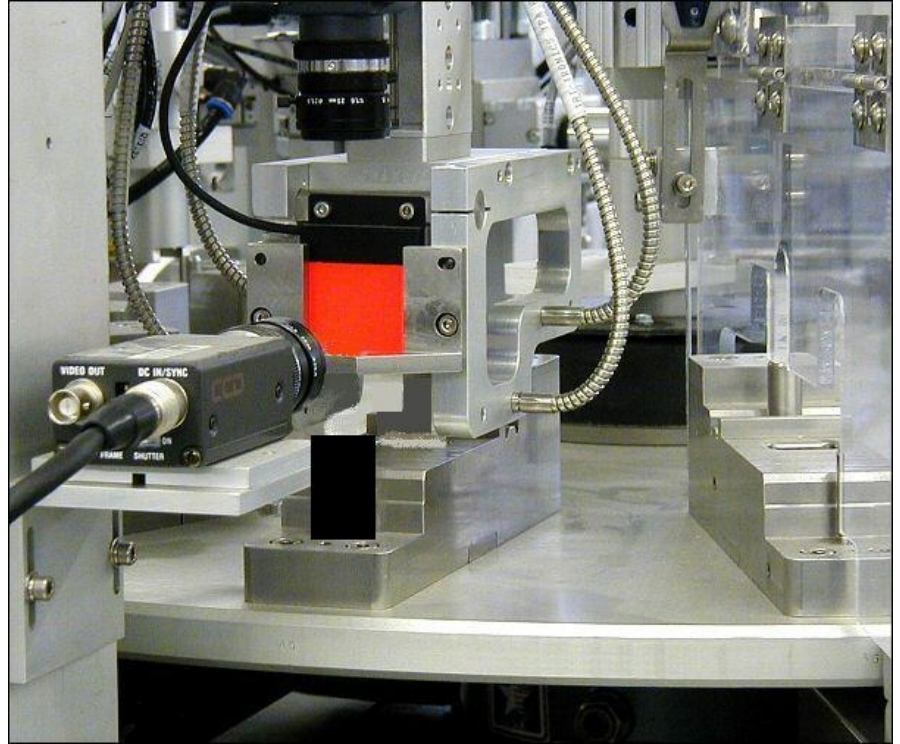

Installation costs can be reduced by using existing cable infrastructures for video transmission and system power.

All from a simple to use PC based desktop application.

If you have a particular application in mind please do contact us, all our advice is confidential and free.

- High definition full HD 1080 image grab
- Realtime recording with time and date stamp
- View cameras on any network connected PC
- Multi-image display on a single local monitor
- Control cameras remotely using a PC desktop application
- Alarm sensor inputs with single frame recording
- Define motion detection segments within a camera image
- Use existing cable infrastructure to view and control cameras
- Monitor plant Health & Safety
